Subject: FW: 2014 VSS Locations

All,

The Harley Davidson service manager has supplied us with the location of the VSS for the 2014 model EletraGlide and the Road King. Please note the wire coloring has changed from previous years which was green w/white tracer.

The speed sensor itself sits just behind the oil dipstick and is held in the transmission by an allen head bolt. This should be the same location as previous models. There should be 3 wires coming from the sensor and are coded as follows:

Red w/ white tracer – 5v sensor power
Light green w/ yellow tracer – VSS input
Black w/ green tracer – Ground

Please share this information with anyone who may have a need.

Thanks

Rod
